

Chief Science Officer for Pfizer Says "Second Wave" Faked on False-Positive COVID Tests, "Pandemic is Over"

Updated on September 26, 2020

In a stunning development, a former Chief Science Officer for the pharmaceutical giant Pfizer says "there is no science to suggest a second wave should happen." The "Big Pharma" insider asserts that false positive results from inherently unreliable COVID tests are being used to manufacture a "second wave" based on "new cases."

Dr. Mike Yeadon, a former Vice President and Chief Science Officer for Pfizer for 16 years, says that half or even "almost all" of tests for COVID are false positives. Dr. Yeadon also argues that the threshold for herd immunity may be much lower than previously thought, and may have been reached in many countries already.

Survival Rate of COVID Now Estimated to be 99.8%, Similar to Flu, Prior T-Cell Immunity

The survival rate of COVID-19 has been upgraded since May to 99.8% of infections. This comes close to ordinary flu, the survival rate of which is 99.9%. Although COVID can have serious after-effects, so can flu or any respiratory illness. The present survival rate is far higher than initial grim guesses in March and April, cited by Dr. Anthony Fauci, of 94%, or 20 to 30 times deadlier. The Infection Fatality Rate (IFR) value accepted by Yeadon et al in the paper is .26%. The survival rate of a disease is 100% minus the IFR

—

Overall, Dr. Yeadon builds the case that any "second wave" of COVID, and any government case for lockdowns, given the well-known principles of epidemiology, will be entirely manufactured.

In Boston this month, a lab suspended doing coronavirus testing after 400 false positives were discovered.

—

In the interview, when questioned about the Spanish Flu epidemic of 1918, which came in successive waves during World War I, Yeadon pointed out that this was an entirely different kind of virus, not in the coronavirus family. Others have blamed general early century malnutrition and unsanitary conditions. World War I soldiers, hard hit, lived in cold mud and conditions the worst imaginable for immune resistance.

—

The former Pfizer executive and scientist singles out one former colleague for withering rebuke for his role in the pandemic, Professor Neil Ferguson. Ferguson taught at Imperial College while Yeadon was affiliated. Ferguson's computer model provided the rationale for governments to launch draconian orders which turned free societies into virtual prisons overnight. Over what is now estimated by the CDC to be a 99.8% survival rate virus.

Dr. Yeadon said in the interview that "no serious scientist gives any validity" to Ferguson's model.

Speaking with thinly-veiled contempt for Ferguson, Dr. Yeadon took special pains to point out to his interviewer:

"It's important that you know most scientists don't accept that it [Ferguson's model] was even faintly right...but the government is still wedded to the model."
